

Mainsaver Activity Full Steam Ahead at Medtronic

San Diego, CA –June 29, 2016: Medtronic has recently completed their 21st installation of the Mainsaver Enterprise Asset Management Software in the Mystic, CT plant. This plant produces the line of Merocel line of polyvinyl alcohol sponges. As an enterprise validated application, Medtronic and Mainsaver are able to rapidly implement new sites as needs arise.

The 21 Medtronic implementations use a common version of Mainsaver, yet are able to accommodate the disparate operational needs of each Maintenance organization. Some sites use mainsaver solely for facility management while other sites maintain manufacturing equipment. In either case, the plants initially worked with Mainsaver to develop a database, define workflows and implement controls required for an FDA regulated and audited environment.

Other Mainsaver activities include the joint development of a job plan library and deployment methodology that allows for decision, action and control at a task level. Mainsaver is also working closely with Medtronic in deployment of the Mainsaver Multi-Plant database structure and upgrading to the latest versions as they are released including Mainsaver's newest mobility product, Mainsaver Connect.
